

LiRI Corpus Platform (LCP)

The LiRI Corpus Platform (LCP) is a software system for handling and querying corpora of different kinds. Users can query corpora directly from their browser, and upload their own corpora using a command-line interface.

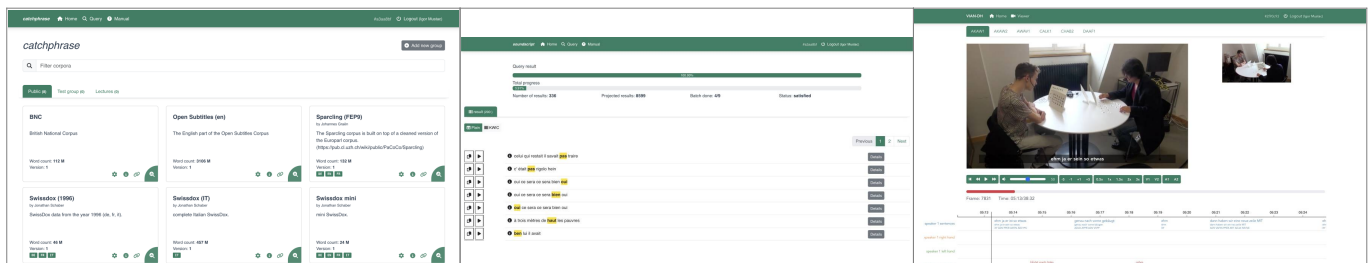

Functionalities

- allows definition of **complex queries**
- users can import their **own corpora**
- corpora is **automatically indexed** for faster search and retrieval
- **modular system**: supports mono- or multilingual and mono- or multimodal data
- comes with a dedicated **DQD** (Descriptive Query Definition) language

Applications

LCP software system consists of several different applications, each allowing the querying and visualisation of different kind of corpora:

- [catchphrase](#) - interface for querying textual corpora
- [soundscript](#) - interface for querying audio corpora
- [videoscope](#) - interface for querying multimodal corpora

By the end of 2024, digital editions will also be implemented and added to LCP system.
